FOR IMMEDIATE RELEASE

March 23, 2007

NOAA'S National Marine Fisheries Service to host public workshops for the recovery of steelhead trout in Southern California

VENTURA, Calif. – NOAA's National Marine Fisheries Service (NOAA Fisheries Service) will hold a series of public workshops to gather information to support development of a federal recovery plan for Southern California steelhead listed as endangered under the Endangered Species Act (ESA). The two-day workshop is scheduled for April 4 and 5, 2007 at Ventura City Hall. Additional workshops are scheduled for San Clemente, San Luis Obispo and Carmel/Monterey.

Development of a recovery plan is important for the successful rebuilding of species identified as being at risk of extinction. Local knowledge from the public on threats or unique needs of these fish is extremely valuable to ensure the plan is comprehensive and includes stakeholder involvement and input. Additional information as the plan develops will be posted on our recovery planning web site listed below.

The first day of the workshop (12:30 p.m. to 4:30 p.m.) will provide an opportunity for the public to learn more about the historical populations of steelhead in Southern California, their current status, and important criteria for steelhead recovery. A representative from the scientific team that developed this information will explain what steps they see as necessary to recover steelhead in the area to eventually remove them from the ESA list of threatened and endangered species.

On the second day (9:00 a.m. to 4:00 p.m.) attendees will be given a brief overview on the recovery planning process and the threats assessment process. They will then organize into small groups for facilitated discussions on the threats facing steelhead in specific watershed areas. The watershed areas to be discussed will be the Santa Maria, Santa Ynez, Ventura and Santa Clara Rivers along with small watersheds in the Santa Monica Mountains and the Conception Coast area ranging between from Point Conception to the Ventura River.

The workshop will be held in the Community Meeting Room (Room 202) of Ventura City Hall, 501 Poli Street, from 12:30 p.m. until 4:30 p.m. on April 4 and 9:00 a.m. until 4:00 p.m. on April 5. Workshop attendance is free, but registration is required due to space limitations. On-line registration is available at <http://www.abag.ca.gov/abag/steelhead/recoveryworkshops>. For those without internet access, or for more information, please call 562-980-4006.

Information on recovery plans for species listed under the ESA may be found at <http://www.nmfs.noaa.gov/pr/recovery>. Recovery plans for federally listed salmonids throughout California and Southern Oregon may be found at <http://swr.nmfs.noaa.gov/recovery/index.htm>.

The National Oceanic and Atmospheric Administration, an agency of the U.S. Commerce Department, is celebrating 200 years of science and service to the nation. From the establishment of the Survey of the Coast in 1807 by Thomas Jefferson to the formation of the Weather Bureau and the Commission of Fish and Fisheries in the 1870s, much of America's scientific heritage is rooted in NOAA.

NOAA Fisheries Service is dedicated to protecting and preserving our nation's living marine resources and their habitat through scientific research, management and enforcement. NOAA Fisheries Service provides effective stewardship of these resources for the benefit of the nation, supporting coastal communities that depend upon them, and helping to provide safe and healthy seafood to consumers and recreational opportunities for the American public. To learn more about NOAA Fisheries Service, please visit: www.nmfs.noaa.gov.
